Dear Jim,

I have enclosed a description of the 77 different varieties in my collection. These descriptions should help you identify your pieces. I start to identify my pieces on the reverse. I have numbered the scroll endings and used the code as demonstrated in the diagrams.

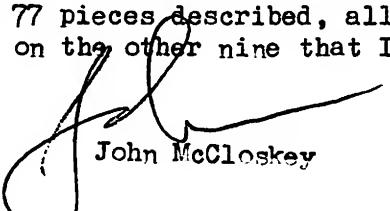

HALF DIME SCROLL ENDINGS

SE - 5

SB - 4

This code eliminates all but a few varieties for consideration. I next use the relative position of the second S in STATES to the S in the motto. If there is still a question I then read the rest of the description. The obverses are a little harder to identify. We use some codes. We number the stars from 1 to 13 in an arc from left to right on the obverse. The code LUCB for example describes the position of the 1st, 7th, 8th and 13th stars in relation to the denticles. For example LUCB means, 1st star points to lower part of denticle, 7th star points to upper part of denticle, 8th star points to center of denticle and 13th star points to between denticles. The 7S code describes the position of the 7th star relative to the headband and this is written out in each case. I am sure that the codes will give you trouble for a while. If you have any questions, let me know and I will be happy to respond. The descriptions that you sent Kam are not bad but they don't contain the keys that I am used to using in my identification. It would take me quite a while to identify your pieces from these. Reference your comments to my notes and I will be better able to respond. I own the 77 pieces described, all around XF condition with some a little better. I have notes on the other nine that I am still looking for that are now known. Happy hunting.
